USE HTTPS

› Encrypts traffic between a website and the client accessing it

› Common in production, but not always in testing and development

› I recommend

  › **LetsEncrypt** - **https://letsencrypt.org**

  › *Whatever your host offers*

PROTECT YOUR DOMAINS

> Increate TTL (time to live) to at least 86400 (1 day)

> Turn on DNSSEC if your registrar offers it

> Verify your contact and payment information

> Ensure auto-renewal is turned on

> Don't share your domain registration account with other services, especially email

> Always implement 2 factor authentication
