THE 3 A'S OF SECURITY

> **Authentication:** Ensure the people that should access the data are the only ones who can

> **Authenticity:** Ensure the data that a user retrieves is accurate and has not been modified

> **Availability:** Ensure the data is available to all users when they need it

LAYERS OF SECURITY

> **The Network:** Internet traffic before it gets to the server/host

> **The Server/Host:** The computer the holds and processes users for your WordPress site

> **The Application:** WordPress and the plugins and themes it uses
