DETECT ATTACKS

> You know your site (and probably your client's sites) better than anyone

>> Is it running slow?

>> Are users reporting problems?

>> Does it look different?

>> Are there new logins, content or other changes?

>> Is there a spike in traffic or spam?

EXTERNAL DETECTION TOOLS

> Don't rely on tools within the site itself to tell you there's a problem

  > Often an attack will disable known reporting and other tools

> I recommend

  > **Jetpack** - https://jetpack.me

  > **New Relic** - https://newrelic.com

  > **Google Search Console** - https://wordpress.org/plugins/csp-manager/
